Front End Technologies AutoCAD is shipped with a visual front end consisting of the Draw and Edit commands that use the graphic interface, plus a number of other tools and features. The UI is built with a toolkit called Graphical Design and Development Toolkit (GDDT). Technical Details AutoCAD LT's native file format is DXF. The DWG file format was created specifically for AutoCAD LT. Though the DWG format was the one used initially by AutoCAD, it was later replaced with DXF in the development of AutoCAD LT and AutoCAD Architecture. Autodesk also supplies a scalable application programming interface (API) called R12. It is intended to be the scripting interface for AutoCAD and other products in the family. The script language is called R. The scripting language is interpreted as a series of instructions to the running application. Autodesk also released a new R language, that is similar to the R12 language, called R2018. It is now available in AutoCAD 2019 and AutoCAD LT 2019. Autodesk released a new runtime for AutoCAD and its related products that is built on the .NET Framework, called AutoCAD Runtime 2019. AutoCAD also supports running on the Mono and .NET Framework Mono runtime. Mono is a free, open-source and cross-platform implementation of Microsoft .NET Framework. This version of AutoCAD runs on Mac, Linux, and Windows. Multi-threading was added for AutoCAD. New editions of AutoCAD that use this technology are 2005, 2008, and 2010. This means that multiple users can work on one drawing and share data simultaneously. When using the ActiveX server feature, there are three key components involved. These are, Autodesk Geometry Engine (A8), Autodesk Vault (A9), and Autodesk Vault Viewer (A10). The Vault and Vault Viewer are used for locking data. The Geometry Engine is the area where CAD data is generated and all types of CAD data are stored. Each drawing created is managed by the Vault. The Vault has to be installed on the computer and added to the trusted location list. To allow Vault access to the file storage area of a drawing, the Autodesk Geometry Engine has to be installed. The Geometry Engine has to be configured. Both the Vault and the Geometry Engine should be in the same location ca3bfb1094

### What's New In AutoCAD?

Walk through your work, without leaving your desk. Now, when you make a change to your drawing, you can walk through your design as you make changes, both with the screen and on paper. (video: 2:38 min.) Graphic styles. With graphic styles, you can build any number of templates—including shapes, filters, text styles, logos, and even graphs—that you can reuse to quickly apply the same type of text to multiple elements throughout your drawing. (video: 3:32 min.) Sync your 3D models and drawings. In addition to the workflows that help you work better, there are new Sync features that make your work easier. (video: 3:47 min.) Colorful ribbons. Markup and create dynamic ribbon style. You can select colors and opacity for individual panels. (video: 4:16 min.) Work on drawings that are displayed in 3D. With Dynamic Ribbon, you can work in 3D, regardless of whether you're working in 2D or 3D. (video: 4:39 min.) Drafts. Incorporate feedback directly into your design—no matter how much of it there is. (video: 4:59 min.) Get to know your AutoCAD users. Now you can scan a person's biometric information and show their face and name in your drawings. (video: 5:18 min.) SketchFlow. SketchFlow, the fastest way to draw, combines speed and precision. You can now draw with a mouse, a pen, a stylus, or a finger. (video: 6:06 min.) Create parametric and geometric surfaces. Now you can create 2D and 3D shapes in any size, including complex geometric shapes such as curves and arcs. (video: 7:00 min.) Take the first steps with parametric geometry. Now you can use parametric geometry to generate a solid form from a graphic. (video: 7:31 min.) New and improved shape tools. It's faster and easier than ever to create custom shapes with AutoCAD's shape tools. (video: 7:59 min.) Quickly align 2D objects with 3D models. You can align 2D objects with 3D models in the 3D Modeling Window, both as a DesignCenter feature
