Carl Zeiss Jena Lens Serial Numbers

Here is the lens serial numbers and approximate date that I could put together from a few references. 1912
_____ 174326 1918 _____
270280 1933 _____ ? 1937 _____
241179 1955 _____ 123769
1956 _____ 107851 I know this
is not a very helpful answer.

But does anyone have any idea when Carl Zeiss Jena lenses were introduced? A: If we look at the production numbers in the catalogues:

1912	_____	174326	1918	_____	
270280	1933	_____	?	1937	_____
241179	1955	_____	123769		
1956	_____	107851	and		

subtract 1936 from them we see that you're looking at a lens that was produced in

1933. So there is a good chance that this serial number is not associated with a lens but just a lens mount. According to the information on Jena-Zeiss.de these mounts were produced from 1919 on. A quick check of the old Zeiss catalogues tells us that these mounts were produced continuously from 1919 until 1940 and then

produced in 1942 and in 1951. Induction of two distinct inhibitory G protein-coupled receptors with different isoforms of truncated and chimeric receptors for quisqualic acid. Quisqualic acid is a potent agonist for the G protein-coupled receptors, quisqualate acid (QAR) and the recently cloned G protein-

coupled receptor termed Gq11. This compound is also an agonist at the AMPA (alpha-amino-3-hydroxy-5-methyl-4-isoxazolepropionic acid) receptors. In this study, we demonstrate that QAR is a functional receptor at both the QAR and Gq11 receptors. The extracellular portions of both QAR and Gq11 are sufficient for mediating QAR

agonism, but only the extracellular domains of QAR are necessary for mediating Gq11 agonism. When the intracellular domains of QAR and Gq11 were fused, the chimeric receptor was functional but exhibited negligible agonism at both QAR and Gq11. We also demonstrate that the extracellular domains of QAR

and Gq11 can be combined to form functional chimeric receptors. These chimeric receptors induced a number
