Ron Johnson (R-WI) told MSNBC's Lawrence O'Donnell on Wednesday that he wants to see the declassification of documents showing that former President Barack Obama's administration spied on the Trump campaign. Johnson has been calling on the Department of Justice and the FBI to share any information they have regarding the Trump campaign's interaction with Russians. He said that while it's legitimate to investigate whether Trump's campaign colluded with Russia, the FBI's investigation "went far beyond the boundaries of any legitimate, any appropriate, any legal to spy on a political campaign." "I would like to know if this is why the FBI became so fixated on Trump," Johnson said in response to O'Donnell's question. "You have to disclose that. That's my request." O'Donnell argued that during the 2016 election, "The intelligence community was spying on an opposition campaign at the same time as a candidate was running for the White House," to which Johnson responded: "Oh, I would really like to see that." "That's not reasonable," he said. [dcquiz] During the campaign, The Washington Post reported that Obama's CIA Director John Brennan was one of three officials who met with former British intelligence officer Christopher Steele to discuss his dossier on Trump. Steele, who is a source for CNN, made the first of three payments to the firm Fusion GPS on behalf of the Clinton campaign in June 2016. Democrats on Capitol Hill have claimed that the FBI started investigating the Trump campaign because the Russia probe was being conducted by then-Deputy FBI Director Andrew McCabe, who is now the acting FBI director. (RELATED: Democrats Suggest That Andrew McCabe Stung The FBI Into Starting The Trump-Russia Probe) The New York Times reported Tuesday that the FBI started investigating the Trump campaign in July 2016, "well before the bureau came across any information about Russian election meddling." What's New in the?

The application intends to change the volume serial number Change ID at your own risk Only works on disks Easy to use Not recommended Needs a computer restart The storage industry will change for the better, or worse, in 2018. Depending on which circles you're in, 2018 is either going to be viewed as a watershed year for storage, or yet another could equally good year for storage, or a third year with yet another vision of what will happen. Fact is, the evolution is both positive and negative all at the same time, and they are both positive and negative because the development of storage technology is constantly evolving. Stable, reliable, efficient, green, and economical - those are the adjectives that come to mind. Each of them can be good or bad. It's been that way for decades, if not longer than that, and it will likely be that way for decades yet. The reality is that the evolution of storage technology keeps pace with the growing availability of and appetite for data - and that is a good thing. The progression of the technology will keep us all safe, happy, and well fed. Beyond that, in some industry quarters, it will keep us locked in, because there is money to be made by catering to the growing demand for data. And it will keep us safe because it will make the world a better place. And it will be economical and efficient for us because there will be a logical progression to the utilization of the data. And all those things will be delivered in time for 2018 to start in an auspicious manner. Perhaps. But as the storage industry evolves, it also evolves from an art to a science, with all those good and bad elements, and as the world adapts to the technology. What you will experience, in 2018, will certainly be different from the way things are today - and the way things have been in the past. Here are a few storage trends you can expect to see in 2018: No.1: End of the tape era Tape storage, a vast and expensive proposition, is still a vital part of the overall storage landscape, largely because of the need to back up data that is not recoverable. Of the many possible ways of retaining backups, tape storage systems - including the DC tape drive - is one of the less expensive ways of going about it. That won't change in 2018. Tape remains a viable and beneficial technology in specific applications, and that reality won't change in 2018

System Requirements For VoID:

• Operating system: Microsoft Windows® 10/8/8.1/7/XP/Vista/2003 (32 or 64-bit versions) • CPU: Intel® Core™ 2 Duo E6600, AMD Athlon™ 64 X2 Dual Core E5400, Intel® Core™ 2 Duo E6700, or equivalent • Memory: 2GB RAM • Hard drive: 20GB free space • Direct X: Version 11 • Shader Model: 3.0 • Screen resolution:
